

SENG2021 Delivarabe-1

Problem Statements

- There is no large navigable and easily searchable collection of Twitch Clips.
- Twitch Clips do not have a rating system.
- There is no simple way to download and save Twitch Clips.
- There is no way to access Twitch Clips without a direct link to them or the streamer's profile. In other words, there is no way to browse Twitch Clips among the entirety of Twitch.
- There is currently no specialised homepage with current Twitch clip compilation channels and videos. This will make browsing and searching for these Clips easier.
- There is no way to search for Twitch clips based on categories and the tops clips for each category.

Design

Static Menu Bar on Every Page (it will stay in same position even if you scroll down)

- Search bar on top, searches for game, game category, tags, twitch streamer, uploader
- Top right corner login/my account if logged in ->account page
- Upload clip button
- Side bar that contains navigation menus and categories
- Home button, returns user to home page

Home Page

- Featured clips/recommended clips/popular clips

Categories

- Sort by twitch game category
- Sort by popular tags,
- Sort by Twitch Streamer
- Sort by uploader (Search by channel)
- What types of compilation it is, e.g. Do you want funny videos, or show-off videos of high-skill gameplay?
- Accessed from a sidebar

Clip Page

- Clip
- Download clip button (saves it as a .webm/.mp4)
- Add to playlist (multiple playlists)
- Clip information (views/date of upload/likes and dislikes/number of comments, License, Category, which Game, Description)
- Description including Streamer, Original uploader, Game
- Thumbs up and Thumbs down Rating System (users can click to give a review of clip)
- Comment Section (same as twitch chat) beside the clip
- Related videos below the clip

- Share button
- Optional Autoplay (First related video - But this means we can't have a loop of videos)

Search Result Page

- List of clips sorted default by popularity, allow user to change search function so maybe sort by recent upload time, or duration of clips.
- Number of results found.

Upload Page

- Enter Twitch Link to upload a clip
- Upload to site button
- Title, Description, Game, Streamer and Tags
- Thumbnail (default is thumbnail of clip)
- Progress bar if we download the clip

Channel Page

- List of Uploads (Sorted on Popularity/Time Added/Rating)
- Total view count on uploaded clips

Clip History Page

- A list of all previously viewed clips in chronological order
- Clip history count (how many videos viewed)

Liked Clips page

- A list of all previously liked clips in chronological order
- A liked clips amount

Upload Button

- Redirects user to upload page

Channel Button

- Redirects user to their channel

Like and Dislike Button

- Like button will increment the like count by 1, removes the like when pressed again
- Dislike button will increment the dislike count by 1, removes the dislike when pressed again

Share Button

- Share button will let you share the video on social media

Download Button

- Will download the clip to your computer in an mp4/wmv/webm format (handled by download manager in browser)

Add to Playlist Button

- This will allow the user to add the current clip to any of their playlist
- Or create a new playlist and add the current clip to it

Side Bar

- When hamburger menu is clicked, it will open up the sidebar with a list of all categories

Search Bar

- Allows users to search for clips by tags, and will perform a server request to get the most relevant clips from the tags, and display them in a list or grid, sorted by relevance, popularity, or sort preference (duration of clip/recently uploaded etc.)

Home Button

- Returns user to home page

Comment section

- Place to type your own comment, possibly formatted and with links
- View other people's comments on the video, and react to them with like/dislike/reply

Upload to site button

- This will upload the request to the site (successfully uploads user's clip to our website)

Autoplay Button

- Switch that lets you toggle autoplay on or off

User Stories

Interested parties of use cases (functional categories):

- Viewer/normal user
- Uploader

Requirement

Users require a medium to navigate through twitch clips

Feature: Search bar to search for queries

As a: Clip Viewer

So that I can: Look for specific clips based on tags
